

AEROSOL RELEASING AGENT

Silicone based AEROSOL RELEASING AGENT is a sprayable release agent for hard foams or polyurethane elastomers. It allows a good release on any surface other than plaster.

AEROSOL RELEASING AGENT is free of CFCs and chlorinated solvents.

Applications

The AEROSOL RELEASING AGENT has excellent release properties, thanks to the hard film it forms. The final castings have a glossy finish.

Ready-to-use aerosol, spray in a thin layer.
Evaporation time of the solvent: 3 minutes
When the silicone film is made, do not touch with the fingers.

It is used in brief spraying inside our pots and polyethylene mixing buckets to avoid the adhesion of different foams mixed inside.
It allows a release of hard foams on Liquid Latex.

Avoid to coat the molded part with ERGOPEAU at risk of a poor adhesion.

Storage

The product is guaranteed 18 months.
UNDER PRESSURE CANS: store below 50°C.
