

GELLING AGENT

GELLING AGENT is a thixotropic agent for RTV silicone, giving them a paste-consistency for an easier application.

Applications

Incorporate 1 to 3% GELLING AGENT into the two-component RTV silicone mixture to thicken before it reaches its gelling time.

The silicone will take the consistency of a paste, able to be applied with a spatula for grouting or filling forms for example.

When used at 1 to 3%, the GELLING AGENT does not affect the final properties of the silicone nor its reactivity.

Specifications

Transparent slightly viscous liquid.

Read the safety data sheet carefully to be informed of the precautions and risks related to the use and storage of this product. Do not smoke, eat or drink while applying.

Packaging and reference

Store at room temperature.

GELLING AGENT solidifies at 20°C. If the product has solidified, place the bottle in a hot water bath to re-liquefy it. The GELLING AGENT is available in 500 mL bottle with the following reference:

REFERENCE	PACKAGING
